

[Movement in Creative Photos & Figurative Pictures by Kanobi®](#)

[Info about my Creative Graphics as Kanobi® and how I create.](#)

I simply like to take photos and create Creative Graphics out of the photo that inspires me to do more with it for my own fun and I am then totally into creating.

I also like to take [Photos](#) or recreate other [Pictures](#) in programs and think about how to create and finish them up, so they best show the issues needed to be sent by viewing the photos or pictures afterwards, ex. for websites, books, posters, front page pictures, etc.

My inspiration to take photos and make pictures I describe more on the page [Digital Art](#) and subpages.

First of all my [Created Graphics](#) are inspired by nature, culture or exiting shapes, colours, angles, lights, shadows, contrasts, transparency, reflection, etc., when I come along with my camera or redesign.

I get inspired when photos or pictures [tell stories](#), show life themes or even better I got something that I didn't see while shooting and they become [Pictures in photos](#).

My pictures become Art to me, when I capture the depts, rotations or highs of life.

My inspiration from other Artist's I have from the Exhibition "Himmel Falden" 2003 in Odense, DK, where the following Artist's and their issues about [Gravitation, Rotation, Levitation](#) still inspire me.

[Antony Gormly](#) and his constructions of humans in differed moods using different materials and places in different sizes.

[Arne Haugen Sørensen](#) for his wonderful colours, his brush strokes and way of telling stories about life and living.

[Fischli und Weiss](#), "Der Lauf der Dinge". Exiting because they led all sorts of things combine and then move using nature elements.

[Viggo Mortensen](#) and his personal photos from years of experience.

I get inspiration to recreate my existing, so they are probably not finished yet;)

I also have created jewelry as jewelry workshops for children on different workplaces back to 1990 and now I like to create [Kanobi® Jewelry](#) including Murano glass beads produced in Venice. You can soon se more on the subpage and also order my earrings.

Have a nice day;)

Best regards,
Birgitte Volkert
